SUMMARY

Solutions Engineer and implementation lead experienced in driving complex post-sales technical implementations for enterprise customers. Skilled at leading discovery, mapping engineering and operational workflows, designing integrations, and translating ambiguous customer requirements into scalable technical solutions. Combines hands-on experience with Python, JavaScript, REST APIs, PostgreSQL, Git, and CI/CD workflows with strong customer communication, technical consulting, and cross-functional collaboration.

TECHNICAL SKILLS

Python, REST APIs, PostgreSQL, JavaScript, Git, GitHub, GitHub CLI, CI/CD workflows, deployment pipelines, data modeling, systems integrations, AI-assisted development workflows, RAG, agentic workflow development, technical discovery, enterprise implementation, customer workshops

EXPERIENCE

DevGrid Inc – *Forward Deployed Solutions Engineer* | Charlotte, NC
Sep 2025 – Present

- Embedded with an enterprise fintech customer to implement and customize an Engineering Operations platform supporting governance, infrastructure lifecycle management, operational visibility, and engineering workflow standardization across teams.
- Led technical discovery and workflow mapping sessions with customer stakeholders to understand application ownership, service lifecycle processes, operational constraints, and long-term engineering goals.
- Partnered with product and engineering teams to resolve customer onboarding issues caused by inconsistent source-system configurations, helping evolve the platform data model to support more flexible typing and schema handling and increasing successfully matched legacy infrastructure components by ~100%.
- Designed and developed an internal operational observability tool to track daily database snapshots, monitor data quality, and surface anomalies across integrated enterprise systems, improving implementation visibility and data confidence.
- Built automated customer outreach workflows using Microsoft Teams integrations to streamline stakeholder engagement, task visibility, and operational follow-through across onboarding initiatives.

Redfin Corporation – *Customer Success and Operations Manager, Senior Agent* | Charlotte, NC
May 2015 – Sep 2025

- Served as a consultative customer-facing lead for complex, high-value engagements involving multiple stakeholders, internal systems, regulatory requirements, and time-sensitive operational dependencies.
- Owned end-to-end delivery for more than 150 customer engagements representing over \$100 million in transaction volume, balancing customer goals, operational constraints, risk, and business outcomes.
- Led detailed discovery conversations to uncover customer priorities, clarify ambiguous requirements, and translate those requirements into structured execution plans.
- Coordinated internal specialists, external partners, and customer stakeholders while managing several simultaneous engagements with distinct timelines and resource requirements.
- Advised customers on process strategy, risk mitigation, and execution best practices, translating complex operational considerations into clear and actionable recommendations.

Yardi Systems – *Technical Account Manager* | Irvine, CA

Aug 2014 – Apr 2015

- Led end-to-end implementations of RentCafe portals for mid-market and enterprise multifamily clients, including discovery, configuration, testing, launch readiness, and post-launch support.
 - Integrated customer portals with Yardi Voyager accounting workflows and adjacent systems, translating client business requirements into technical configurations and implementation plans.
 - Partnered cross-functionally with product, engineering, QA, and support teams to troubleshoot implementation issues, resolve client friction, and deliver projects on schedule.
 - Managed more than 20 concurrent and completed implementations across customers with differing technical environments and business requirements.
-

PROJECTS

Frontstead – *Founder/Principal* | app.frontstead.com

- Designed and developed a full-stack real estate operations platform using React, Next.js, Node.js, REST APIs, and PostgreSQL.
 - Built application workflows, operational dashboards, and MLS data integration pipelines focused on workflow standardization, data visibility, and brokerage operations.
 - Developed scalable data models, API patterns, and automation workflows using AI-assisted development tools to accelerate prototyping and technical iteration.
 - Built agent-based operational tools to support task execution, workflow guidance, and internal process automation.
-

EDUCATION

UNC – Charlotte – *Full Stack Software Engineering Certificate* (2024)

University of Massachusetts, Amherst – *B.B.A, Honors College, Cum Laude* (2010)

ADDITIONAL EXPERIENCE

Brightcove – Business Development / SaaS Media Platform Solutions

Vidcaster – Enterprise Video Platform Solutions Partner Sales

Percussion Software – Business Development Representative
